Professional Summary

AI/ML Engineering student with hands-on experience building ML/DL models, RAG pipelines, REST APIs, and full-stack web applications. Proficient in Python, TensorFlow, PyTorch, and core SE concepts including OOP, DSA, SDLC, and Agile development. Focused on delivering real-world intelligent systems.

Technical Skills

- **Languages:** Python, SQL, Java, C, C++, JavaScript
- **ML/DL:** Scikit-Learn, TensorFlow, PyTorch, RAG, FAISS, LangChain, Cohere
- **SE Concepts:** DSA, OOP, REST APIs, SDLC, Agile, Version Control, API Integration, Debugging, Unit Testing
- **Tools:** Git, GitHub, Docker, Flask, Jupyter, Power BI, Tableau **Web:** HTML, CSS, JavaScript

Experience

InAmigos Foundation

May 2026 – Jun 2026 · Remote

Web Development Intern

- Developed a multi-section awareness webpage with scroll-reveal animations across 6 content sections covering 4 NGO programmes, improving outreach engagement.
- Built a reusable responsive photo gallery displaying 30+ NGO images across 5 content sections; delivered a 5-feature mockup document for stakeholder presentation.

JPMorgan Chase & Co. — Software Engineering Job Simulation

March 2026 · Virtual

- Completed industry-grade SE tasks including REST API integration, OOP-based module development, debugging, and code review aligned with JPMorgan's engineering workflows.

Projects

MindLink — RAG PDF Chatbot

Python, Flask, FAISS, Cohere, LangChain

- Built a Retrieval-Augmented Generation chatbot for natural-language Q&A over PDFs using FAISS vector search and Cohere LLM, with a Flask REST API backend handling document ingestion and query endpoints.
- Improved retrieval speed by chunking documents into 512-token segments and caching FAISS indices, enabling sub-second query responses across multi-document contexts.

Smart Traffic Signal System for Emergency Vehicles

Python, ESP32-CAM, Edge Impulse, Arduino, Firebase

- Deployed a computer vision pipeline on ESP32-CAM using an Edge Impulse-trained model achieving 90%+ ambulance detection accuracy in real time.
- Integrated Firebase Realtime Database for sub-second synchronization between detection hardware and adaptive signal-control logic across multiple intersections.

Emergency Vehicle Router Web Application

JavaScript, Python, Leaflet, OpenStreetMap, Firebase

- Developed a full-stack routing app integrating 3 map services (OpenStreetMap, Leaflet, Firebase) with dynamic roadblock-avoidance algorithms for optimized emergency vehicle navigation.
- Designed a real-time dispatcher dashboard visualizing live route and traffic data on an interactive map, reducing manual route-planning overhead.

Education

B.E. in Artificial Intelligence and Machine Learning

Expected Jul 2027

Canara Engineering College

CGPA: 7.9

Pre-University (PCMB)

Mar 2023

Dr. A V Baliga College of Arts and Science

90.33%

Certifications

- Generative AI and ChatGPT — GeeksforGeeks (March 2026) | Software Engineering Job Simulation — JPMorgan Chase & Co. (March 2026)

Achievements

- Built and demonstrated a functional AI-based prototype at HACKOTASVA'26, a 24-hour hackathon hosted by SMVITM Bantakal, collaborating within a multidisciplinary team.
