

SHANTARAM S DIVGI

Mangalore, India | sarveshdivgi@gmail.com | +91 8217200691

github.com/RamDivgi | linkedin.com/in/shantaram-divgi

PROFESSIONAL SUMMARY

Artificial Intelligence and Machine Learning undergraduate with experience developing AI-powered, computer vision, and full-stack applications using Python, TensorFlow, PyTorch, JavaScript, and cloud-based tools. Built real-time intelligent systems integrating IoT, machine learning, and routing technologies for emergency response use cases. Seeking Software Engineering, AI/ML, or Data Analytics internships where I can contribute to impactful products while strengthening industry-level engineering skills.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, Java, C, C++, JavaScript
- **AI/ML Technologies:** Machine Learning, NLP, Computer Vision, Generative AI, LLMs, Prompt Engineering, RAG, AI Agents, LangChain Fundamentals, Vector Database Concepts
- **Frameworks & Libraries:** Scikit-Learn, TensorFlow, PyTorch
- **Databases & Cloud:** SQL, Firebase (Realtime DB)
- **Tools & Platforms:** Jupyter Notebook, Git, Power BI, Tableau, Edge Impulse, Arduino/ESP32-CAM
- **Web Technologies:** HTML, CSS
- **Soft Skills:**

EXPERIENCE

InAmigos Foundation — Web Development Intern

Remote

- Engineered a responsive, animated awareness webpage using HTML/CSS with scroll-reveal effects, increasing visitor engagement and on-page interaction for the NGO's outreach campaign.
- Built a reusable, responsive photo gallery component for organizational storytelling, improving content presentation across the site.
- Designed and delivered a stakeholder-ready visual presentation highlighting 5 key NGO website features, used for LinkedIn promotion and internal review.

JPMorgan Chase & Co. — Software Engineering Job Simulation (Virtual)

March 2026

- Completed hands-on simulation of JPMorgan's technology division workflow, solving coding exercises and debugging functional modules under real-world software development constraints.
- Applied software engineering best practices including modular code design, testing, and problem decomposition to deliver working solutions within simulated sprints.

PROJECTS

Smart Traffic Signal System for Emergency Vehicles | Python, ESP32-CAM, Edge Impulse, Firebase, CV

github.com/RamDivgi

- Built a real-time computer vision pipeline using an Edge Impulse-trained model on ESP32-CAM to detect ambulances with high accuracy, solving urban traffic delays for emergency response.
- Designed an adaptive traffic signal control algorithm that automatically prioritized green-light clearance for detected emergency vehicles, reducing simulated response delay time in congested intersections.
- Integrated Firebase Realtime Database to synchronize detection hardware with signal control logic, enabling sub-second data updates across distributed traffic nodes.

Emergency Vehicle Router Web Application | Python, JavaScript, Map APIs, Firebase github.com/RamDivgi

- Developed a full-stack routing web app leveraging Map APIs to compute optimized navigation paths, cutting emergency vehicle travel time through dynamic route recalculation.
- Implemented real-time traffic analysis and roadblock detection logic to automatically reroute vehicles, improving response efficiency under live traffic conditions.
- Designed an interactive dispatcher dashboard to visualize live routes and traffic data, improving decision-making speed for emergency coordination teams.

EDUCATION

B.E. in Artificial Intelligence and Machine Learning — Canara Engineering College

Expected Jul 2027

CGPA: 7.9

Pre-University (PCMB) — Dr. A V Baliga College of Arts and Science

Mar 2023

Percentage: 90.33%

CERTIFICATIONS

- Generative AI and ChatGPT — GeeksforGeeks (March 2026)
- Software Engineering Job Simulation — JPMorgan Chase & Co. (March 2026)

ACHIEVEMENTS

- Participated in HACKOTASVA'26, a 24-hour hackathon hosted by SMVITM Bantakal, collaborating in a team to build a working prototype under time constraints.
